Constantine 2023

CALL FOR PAPERS

Sports sciences have contributed to better support the athlete from his selection, his orientation, the control of his training to the evaluation of his sports performance. The life sciences, engineering and human sciences have completed and developed the place of sport in society. They made possible to better understand the effects of sport on the human body.

Physical activity has become an important element of scientific curiosity, through its benefits on health and quality of life. Accompaniment through physical activity increasingly concerns a wide audience ranging from young to old, from athletes to non-athletes and from healthy to sick people.

The Research Laboratory for Expertise and Analysis of Sports Performance (LEAPS) is associated with the institute of Sciences and Techniques of Physical and Sports Activities (STAPS), Abdelhamid Mehri- Constantine 2 University, in partnership with the Laboratory of Genetic and Molecular Biology (Faculty of Medicine, University of Constantine 3), to organize the 3rd international sports science congress entitled "Sport, Science and Health"

This congress will be an exceptional event where we will discuss the latest research and developments in the field of Sport and Health in the presence of high-level speakers from five continents gathered in one place. It will provide a space for scientific and knowledge exchange for researchers and professionals in sport and health.

Welcome to Constantine, City of Suspension Bridges.
